A BEAUTIPUL POEK.

The following poem comes to us like a strong gweet voice from the temb. It is difficult to recline that the earnest eyes that looked upon the lases as the pen traced in language the beautiful sentiments of a superior mind, are closed forever. How beautiful his life was, those only know who came within the circle of her laftence. Of herself she once said: "Stronge to my, the happinest measurants of my life have been passed with a Bible upon my kness, a created hope in my heart." Bis was no stronger to serrow; but a strong, hrave, true wasses, who took up her cross and here it meekly to the cod. As we look upon these lines, panned years ago, before the leeps had "gone out like a watered and fiding fire, leaving only cold ashes upon the hearth, unhidden tears will gather—a theread memories will return, bringing the carnest longing for the class of a hand that will linger no more on cure—the sound of a voice that is mute forever.—Ed. of Sai. Eve. Poet.]

"The Syrians have said, the Lord is God of the hills, but He is not God of the valleys."

Not only they, in later time
The doolrine wanders far and wide,
As well in sunny Christian climes
As where the Syrian becauter died.
Since Israel stood at Sinal's base,
And Sinal's mountain plories saw,
Yet in the valley dared to place
An idol on his broken law.

There syring the tides whose mostic flow Will circle to the bounds of time.

There influence is born to go,
Far entward to remotest clime.

We know the fixed eternal eyes
Will scan the height of earthly fame,
But will not pass unheading by
Obscurity's most lonely name,

Where dauntiese martyr feet have trod
Is left a line of living light,
Their prison chain and burial sod
Is hallowed ground to mortal sight,
But here and there an unknown one
With God will equal title take,
Who held life's suffering cup alone
And drank in allence for His sake,

One day in seven believers bow,
As worshippers at hely shrine.
And touch with reversed lip and brow
The Sacramental bread and wine.
Tis high and soleun thing to stand
So far accorded, near to heaven,
But shi the six days, valley land
Between these elevations given.

The weary lot of daily care
Must every mortal foot pass through,
Amid thee chill and dusky air
The Master went and calleth you.
The darkest way by sorrow trod,
Where shades are deep and isngest cast,
Is nearest, like the path which God.
To bring us bright redemption passed.

There's difference in the work to do,
But far and wide the race of man
Are slow, and surely working through
Eterality's stapendous plan.
In homes where life is still and calm,
Where feeling alseps a lake of light,
In temples where the holy pealm
Is chanted in the starry night

Across the wave whose silver tide
Hath touched the lip of India's strand,
To whose the Alpine weath is tied
Around the Switzer's fatherland.
Go, champion, gird thine armor ot,
No matter where the station found
So those art there, an humble one,
To labor on appointed ground.

By faithful feet who walk with God
Along the vale of earthly strife
Will be one day in givey tred
The highlands of oternal life.

There was semething in her terrified earnessess that seemed to dispel the cloud resting on her father's intellect, and to imprese him with the necessity of at once yielding obedience to her directions, and, without a word, he spring up before her, selved the tether in the hand, and the next moment, the tough little animel, seemingly unmineful of the double burden he carried, planged into the forest in the most occurring, repidly leaving behind him the forcely contending combatants.

The combined effects of fresh air and equestrian exercise some restored Mr. Fay completely, and when Gertride became uware of this, abe hastily informed him of their real situation, and of all she had endured in allence so long. In the meantime, the brave fittle macke behaved admirably, pushing steadily on as though aware of how much depended upon his speed and endurance, and picking his tangled way wish a discretion exhibited by no other beast of burden save the speeds to which he belonged. Ight was beginning to glimmer fiftifly in the east, when they emerged from the dark forest through which their way had thus far lain, litte a comparatively open glade, where for the first time Mr. Fay stayed their progress, for the purpose of obtaining, if possible, some idea of the direction in which they were travelling, and to observe if there were any indications of their approach to civilized humanity. But the halt was scarcely effected when a tall, dark man, whose deeply bronzed face and peculiar features bespoke his Arabian origin, stood before them, and was followed by another and another until they were surrounded by half a dozen armed and desperate looking regabonds, evidently represented their weapons in silence, while the first, who seemed to be their leader, ordered them briefly and perempterily to dismeans.

"I being with me two travellers. The ship in which they salled was dashed in pieces in the storm last night—they wandered into the forest, where I found them. The man is my brother—the danasel is the child of his old age—the solitary lamb left in his fold. Let them be cared for as though they were of my own tribe."

"Both are welcome," was the answer, in a strangely sweet, moistraful voice, "Are you Regilish?"

"American," Gertrude said, feeling curiously drawn towards and repelled from the singular being with whom alse was confronted. "You are not my countryweens, I think, although you speak our language perfectly."

"I am not," said the lady of the case, with a shudder, "but I am glad to see a woman from any civilized land. It is long since I have seen one like you, though once I had much for associates, incomprehensible as that may appear. But you need rest, poor child! You are exhausted with fatigue and travel. Their case demands insuedists attention, and it is to our wealthy and influential citizens, who have already done so much to alleviate the inferings resulting from the war, that we must again turn for aid.

There is scarcely a city in our, land where some public work has not been needed, suggested, perhaps commenced, and then dropped, or suffered to die away. Here a Hall, there a Bridge, in one place a School, in another an Institute for the advance of art or science, is waiting the "sometime" which is to come for its erection or completion. The time has come when public spirited men can contribute this needed addition to their city or town, and employ their returned volunteers to erect it. Let the leading men of each place start the subscriptions, and others will readily follow, while the work will live, a lasting monument of their generosity and charity. If there is needed a further engagestion, may not the monument to our marryred President, for which means are being raised in every city, be made the avenue of employment for some of these idle soldiers, who are so anxiously seeking work. It would surely sour on the subscriptions if it were known that the Lincoln Monument was to be erected by the hands of the Returned Volunteers.

A BEAUTIFUL INCIDENT.

A lady, just returned from a visit to New England, related to us the following incident, which occurred on Boston Common on the 4th England, related to us the following incident, which occurred on Boston Common on the 4th of July: It is customary upon that anniversary to play upon the Common the national airs of each country, the brass band being upon a raised platform, encircled by flagstaffa. As each air is commenced, the flag of the nation which it represents is run out upon a pole, until the whole platform is surrounded by the varied bunting. The final air is always the Star Spangled Banner, when the stars and stripes are flung to the breeze far above the musicians' heads.

Upon the last fourth, before the American flag was raised, the musicians rose, and standing, performed the President's Diega, while a mourning-bound flag was alowly raised to half-mast. During this time, when all the crowd of spectators paid client reverence to the memory of the great dead, a large and very beautiful butterfly (the Greek emblem of the soul or immortality) hovered over the crape-bound flag, until the last note died away, when the beautiful visitant soared out of sight.

To the Publishers of the Saturday Evening Post—Gentlemen —I think I may safely estimate the bulk of light literature I have read in my vagabondising and long sea voyages, at about two and a quarter cords, and in it all I have no recollection of having read anything which comes so near my besu ideal of a real remance as Eve Isle. The author might have been better posted in South American scenery and Pacific salling, but we can well forgive triding errors in a story so admirably written. I have read Eve Isle thus far with more interest than I ever read a story before, and my opinion is that it is the best romance yet published in this country.

COSMO.

NEW PUBLICATIONS.

Among the many novels from the house of A. K. Loring, we have read the Minasticus with interest. It is a well written stery—not abounding greatly in incident, but merely a history of the life and customs of the inhabitants of that beautiful valley in Now Bremswick. The purpose and chief motive of the work is very apparent, winning for it the only hearty seminaridation the reader finds it possible to give. There are good, well defined characters—not very original or remarkable; but sensible, well-meaning people, such as we may find anywhere. The conflagration seems is thrilling. It brings vividly before the mind the wild, grand, terrible picture of a some from which the brevest will abstall shudderingly. Ending happily, the boat leaves on the mind a pleasant impression, which cannot be said of all the works we have been called upon to read.

"Ferhap." said the General, "you would like to see the horse I have ridden during all of the sampaigns that. I have commanded." The General ordered his herse to be brought out. To the surprise of the gentleman the animal seemed no more than a lady's paifry. Small, slender, with agile limbs, black as a coal, an eye like a hawk, intelligent, but mild, with the unmistakable "lick" on each side of the mans, not unlike the "cowlick" on a boy's head, looking for all the world like a family pet for women and children. The visitor uttered his astonishment by saying "Beautiful, but no endurance." "Endurance!" mid Gen. Grant, "this animal exceeds any horse fiesh I ever saw for endurance. I have taken this horse out at daylight, and kept in the morning. Gold could not buy him. He was imported from a rare bred by Jeff Davis himself. He was taken from Jeff Davis's plantation." This conversation was held just before Davis was caught. "I suppose," said the visitor, "you would exchange it for heave." Such is the rebod chief, but for nothing else under heaven." Such is the renowned war horse of the Litutenant General. "I would exchange it for the Litutenant General."

Good Looks and Good Living.—The penchand of the fair sex for good living has something in it of instinct. A series of exact and rigorous observations have demonstrated that a succulent diet, delicate and well attended to, repulses for a long time and very far the exterior appearances of old age. It gives more brilliancy to the eyes, to the skin more freshness, to the muscles more support; and as it is certain that wrinkles, those formidable enemies of beauty, are due to the depression of muscles, it is equally true to say, all things equal, that those who know how to est are comparatively ten years younger than those to whom this science is a stranger. Painters and sculptors are well aware of this fact, for they never represent those who are abstinent from choice or duty, as misers or anchorites, without giving them the paleness of sickness, the leanness of misery, and the wrinkles of decrepitude.

She was gone more than an hour, and came back looking perhectly radiant with delight.

Harry thought he had never seen her face look so since the bright days when she first began to love him. Had some new love now awakened that brightness? Yet, as he looked at her, so pure and noble in her young beauty, it seemed utterly impossible to associate the idea of crime with her.

in her pocket, to be devoured, as he imagined, with greedy delight when she was free from his restraining presence. Nor was it long before he received fresh preof that her correspondent was always the same person.

One morning Bessie was hunting everywhere for a letter to her mother which she wished Harry to put in the office for her.

"I don't see where it can be," she said; "and you are in a hurry to be off. Just look in my desk, Harry, and see if I have put it there."

Thus authorized, Harry went to the desk, a thing he would never have done without her permission. As it was intensely repugnant to him to learn her secrets by any clandestine observation. On the velvet cover of the desk he found the letter to her mother, and underneath it was another with the same mysterious address he remembered so well.

"Never mind, Harry, I will hunt for it myest."

"I have found it," he said quietly; and Bessie did not know the effort it cost him to frame the simple words.

You, Harry feit that his heart was slowly breaking, that he could not much longer endure this state of estrangement, and slow, torsuring misory. But what could be do? Was there any hope that he could win back his wife from her new fancy to her old love for him? Ains! no; he felt that if she really had consed to love him, he could never hope to rekindle the dual affection. He had far better this himself from her path and leave her to her fave happhens. But here? Bessettmen a dark thought of suicide crossed his mind, only to be dismissed as too un worthy. Hight he not then propose to her to go back to her fallers hearts for a time, and there think calmly whether she would give up her husband for falle new lover? Gradually this plan framed State in Harry's heart. Again the curtain between the rooms was lifted, and Basil Fielding entered, looking brighter than Virginia had ever seen him. She rose to greet him, and then as he sait down at her feet, on the footstool against which her guitar had been resting; she said,

"It is rather too warm to be exacting, Col. Fielding, or I should ask a song from one who usurps my guitar's place."

"I did not some to sing to day, but to speak," said Basil Fielding, in his full, rich voice. "Virginia, dear Virginia, your must have seen the love I have been so long waiting to declare; you must believe me when I say that Rie's prospects have less their brightness, unless hallowed by the sunshine of your smile. You will not tell me to leave you, the most miserable of men, but you will permit me to stay by you and shield you from earth's storms, and render your life all that human devotion could make it. You will, you must love me a liste!"

Virginia did not answer, but the white hand he had taken and pressed to his lips was not withdrawn, and together they listened, with new comprehension to Ralf's voice swelling out, in the summer stillness, with the words of the old song—"Oh I there's necking half so gweet in life."

"Miss Fannie, we shall soon be separated, but I trust the devotion I have manifested will have made you miss me enough to render you glad to see me when I return, which, with your permission, I hope soon to do."

"Why, really," said Fannie, playing with her fan, "I cannot see what my saying has to do with either your going or coming, or, if it has," she exclusioned, as a bright thought struck her, "don't go at all."

Be saying she withdrew her hand and slipped away to her cousin, who was looking for her in every direction. Tom pished and pehawed. He was really disappointed, for he loved Fannie as much as one so selfish could do, and she had become, he felt, necessary to his happiness. He would not return to the ball room, and the next morning he was gone, leaving a most affecting note of farewell, and intimating that he might, even now, be recalled—but he never was.

XIII. The next merning Miss Miller informed the girls of her engagement to Mr. Reodgracs, mying she had written to inform their parents, and would, of course, wait their response before leaving her present charge. Virginia listened kindly, and even proposed relieving her from Clara part of every morning, that she might be at liberty to receive Mr. Suedgrass. Virginia dreaded the thought of what the interview might bring, but it was too late to draw back now, so she quietly preceded him late the room he designated.

"Miss Norria," he said, and is his eagernose his words came far slower than usual, "I love you, can you, will you love me a listic?"

"I am very, very corry," hegan Virginia, but his thoughts outran her weeds, and he said:

"Then it is as I feared, it le Col. Fielding. He is much more worthy than I am; but, indeed, Miss Norris, I wanted to go to the wars, but I couldn't leave my father."

"I know," said Virginia, "how good you are. Believe me, I shell always value your friendship, for I know how much it is worth. of a whiskey-loving Hibernian, who had been inflicting upon his fellow-passengers his own exceeding superiority with regard to politics, etc.

Everybody had grown tired hearing him declare that they were all a set of "spalpeens," whom a poor frishman must come "across the say to taych," and several had mildly requested him to "dry up?" But he was pretty quick, and succeeded, by use of his indicrous phrase-ology, in coming out ahead of them all, and gesting the laugh on his side.

Finally, this civilian, soldier, sallor, or what not—one of those quick-eyed, intelligent, but still fellows, with long faces, and a reserved but respectful dignity, which one occasionally meets in the world, left his sees—just in front and nearly opposite the voluble Irishman—and walked quirely toward the door. The Irishman sang out to him—

"Bay, Surgeon, dux you blave there's anything more'n gineral the matter uv me?"

The "surgeon" stopped, turned quickly round, and looked Irishy in the eye, with his own bright optics, for nearly half a minute, when he replied, and passed on—

"Yes; you are troubled with chemic blarney!" Irishy was "wound up" completely, while all in the car came down with an immense "guffah !"

HARROUNE TAIR.—It is pleasant to recall a beautiful interchange of compliments—sincers as the speakers themselves—which took piece between Jerrold (who has a see in this eigh and Leigh Hunt, at a dinner given some years age in honor of the latter. Jerseld said of the veteran essayist and poet, that even in his hottest warfare, his natural sense of beauty and gentlenes was so great that, like David of old, "he armed his sling with shiring pubbles of the brook;" and Leigh Hunt, with equal grace and truth observed of "his friend Jerrold," that "if his head the using of the box, he had also his hunsy."

The degree of Doctor of Laws, conferred by Harvard University upon General George Meade, United Battes Army, was in the following terms:—"Illum exercitus Assertami imperatorum, qui perioniosissimo, belli discrimine res patrie virtute et consilio restituit, Georgium Gorden Meade." Which is translated thus by the Besten Courier:—"George Gorden Meade, that commander in the American army who, by his valer and wisdom, at the meat dangerous moment of the war, turned the tide of victory in favor of his country." The graduating class roce and gave nine cheers for the General, when his name was pressounced by the Presi

[27] An Old Farrate —The American public may expect to be electrified before long by a dispatch, dated. "Valentia Bay," from De Bauty, about whose identity and name there was so much husserous entreversy in the newspapers at the time of the first attempt to lay the Atlantic cable. This mysterious individual accompanies the new expedition new making its careful progress over the coam as electrician, and the first news we receive of the success of the great enterprise will be verified by the once familiar eighbore of "De Santy." It will be anxiously awaited.

[27] Too Show.—Electricity may be too slow in case of life and death. The Queen of Spain, last winter, undertook to pardon a murderer, but the communication was intercepted by anow on the wire, and the culpris was executed two hours before the dispatch arrived.

The Soods of Knowledge.

The evils of beginning too early to educate to plant, are awfully illustrated in the follow

or to plant, are awfully illustrated in the following:

"My little girl is only two years old," said a deting mether to an illiterate philosopher; "but the is wery bright, and flowered, and I am learning her her insters. The hes get as fire as A. H., and U, which she know at first sight, and also round O, and evented S; and I intend she shall be the leading scholar, when she grows up, owing to my heginaing so early."

"Too airly, ma'sm. Too young a crister."

"Oh, no; the has nothing also to do but play, and is in a waste of time for her to play all day."

"To're wrong! ye're wrong! Ter strain her mind too much. Don't she equirm when ye're a teachin on her, and don't she sigh when she's askep?"

a teechin on her, and don't she sigh when she's askep?"

"Well, she does; but what of it?"

"That's because she's overworked, ma'am. It will keep her back, instid of puttin on her forred. Now, my mother did the same with me; I was onkiumin bright and likely, too; but she up and set to work to plant the seeds of larnin into me, when I could akersely walk, and I come to nothin. So it is, ma'am, as you plant for vegetables; if you expect for to git ahead by plantin after the sile is ready, you will find the seed will ret, and come to little or nothin. I was planted with them blamed alforbid letters too airly, and it stunted my intellect, and you see what a poor ignorant cuss I am."

Mot and Cold.

Dan Marble was once strelling along the wharves in Boston, where he met a tall, gaunt figure, a "digger" from California, and got into conversation with him.

"Healthy elimate, I suppose?"

"Healthy? It ain't anything clos. Why, stranger, there you can choose any climate you like, hot or cold, and that without travelling more than fifteen minutes. Just think o' that the next cold morning when you get out of bed. There's a mountain there, with a valley on each side of it, the one hot, and the other cold. Well, get on top of the mountain, with a double barrelled gun, and you can without moving, kill

le came to-day. He brought his bride;
And through the wood they went with me:
We passed our ancient trysting tree;
oaw him turn his head aside,

And wondered if his glance would fall On letters carved by him of yore, In days that he regrets no more— That I with burning thoughts recall.

The golden Past, that haunts me yet, Whose faded giory seems to him Like twilight distance, cold and dim-Oh, strange it is how men forget?

Yet through those hours my will was strong. To school my heart to stifle pain—
I could not act that farce sgain!
But night came, though the day was long.

Night came; they went. His farewell tone Rings in my ear. 'Twill be the last! My heart's fierce ordeal is past; Beneath the stars I stand alone.

A JERSEY CORN-PIELD.

The probability is that in the future so long as we shall live, whenever we hear the question saked, as we have done semetimes—"Can there any good thing come out of Jersey?" we shall reply promptly and positively—

Yes—a great many good things—to with

so hill the Cotton Hydra and strewed a handred Southern battle-fields with their own and rebal dead.

Then Jertey produces famous awest potatore, and strawberries, Lawton blookberries, very superior watermalone and canteloupes, and-well, Jersey self produces and canteloupes, and-well, Jersey self produces anything in the grain, grass, fruit, and vegetable way with proper culture and dare that any other state in the Union will produce, and quite as good, tee.

Whenever we shall hear any one this present season beauting of his corn-field, if he is not too remote, and can afford two or three hours to self-instruction, we shall advise him to crease over to Jersey by any of the Camden ferrice, and pay a viole to the farm of Joseph Keign, Englicated on the line of the Atlantic Ralbrand, and about a mile and a half from fowr. The farm is high and dry, the soil a light eardy leam—only superior to the adjoining territory by jadicious management and thorough sultivation, and although Mr. Keign always expects maximum crops from his fields, and gets them, too, they are never exhausted, nor does any constitutely proportion of his income go into the portions of the vanders of marcastile manures. His presente is, then which we have been preaching they the winder of marcastile manures. His presente a maximum crop every year, and maintain limit in prime condition.

the practice is a mistaken one, Mr. Kaign's yield of ours has never yet given evidence of it.

The field was ploughed and prepared in the sarly past of May, planted about the fifteenth, has had three cultivations with the "five-tood," A shaped subtivator, medified by an improvement of Mr. Kaign's, and at the present time, July 20th, stands remarkably even over the whole field, averaging sine feet in height, and as the tassels and ears are but just set, it ought seconding to general even economy get up quite eighteen inches higher in the world at maturity. The ear sets average three to a stalk, and over the entire field we did not observe a missing hill. The stalks are stout in proportion to their height, and if heliconen this and maturity the crep meets with ne discouraging violaticules, the yield cannot fall short of ninety bushels per area.

yield cannot fall short of ninety bushels per acre.

The maguring of the field was with compost in the rows at planting at the rate of ten one house cardeade per acre. The proportions and constituents of the compost for this particular field were about as fallows:

One cardinade per acre. The proportions and constituents of the compost for this particular field were about as fallows:

One cardinad of night soil, thoroughly incorporated, with from four to five londs of earth from the farm, canght up at odd times, a cardinad here, and another there, from borders of fields, head-lands; and corners where its native fertility was not required.

On the opposite side of a private road dividing the farm Mr. Kaign has another and larger field of corn of later planting, promising results equal to that famous ten acres, and, taken together, these two Jersey corn-fields are to any practical agriculturist, or any other man or woman who appreciates good farming and admires esceletar crops, well worth a day, and a pigrimage of a dozen miles.

Now that we have got Mr. Kaign's farm and his management in hand we intend to look at some of ire other strops and proceedings occasionally. The probability is that several other farmers, both in and out of Jersey, may be benefitted by it.

WINDMILL WATERING.

It is a pity that in about seven cases out of ten, on an average, all over the country, where windmills have been erected for the purpose of pumping water, that they should prove either a partial or a total failure. The result has been to throw the windmill practice among farmers into very general disrepute, and entailed upon innumerable herds inhabiting high, dry farms, where there is no "living" water, a wast amount of suffering from thirst, and a consequent actions loss in fissh to the proprietor.

Now, our nestlive dealeration, practicated

rious loss in fiesh to the proprietor.

Now, our positive declaration, predicated upon experience, is that a windmill of sufficient capacity to supply an abundance of water to any number of four-footed drinkers can be cheaply constructed so simply that it will perform its duty for twenty years with no butlay for repairs, and as little liability to get out of order as the best Yankee twenty-four hour clock ever built.

WRITTER FOR THE SATURDAT SYRPING POST,

Carses Faires and Vesserables.

Some one, somewhere, lately, has been selling the quantion, aeriously—

" Candidly—can cannod corn in the ear be

"Candidly—can canned corn in the car be kept?"

What a cosmittal—of course it can. But whether it can be kept in a condition fit to eat, is a question that has mover been satisfactorily setfled. In my opinion, never will be until the Perpetual Motion becomes an accomplished fact. I had forgatten, just then, that our Western savages have a way of breefing their "remaining care" sound, sweet, and good, the year round. But that is their secret—one that white men and women have not found out yet. I might worm the secret out of our friend Cosmo, I think, for I remember now, that less March he gave me two of the nices "rousting care" I ever tasted, and told me he had Indian session than last year. I'll have that red man's ectance from our Cosmo polits, some day—

Ah—Our Lady Commander of the Poet has advised me that some other lady, away up in the Green Mocustain regions, has made inquiry as to the best method of putting up and putting sway in cans, to keep, green ourn and peas.

Now, I wish that Vermont lady had written to me direct. How ready I would have been to sit right down and filled all four pages of a foolsoup sheet with everything I knew about putting up own, and beans, and bean, and derries, and—and every thing else—only it is just possible I don't know the best wey, by half a dosan or so.

Paha! I have forgotten again, that not more

Paha! I have forgotten again, that not more than ten people outside of this narrow neighborhood knew anything of Madeline's existence, nor where to write her if they did. But I remember it now, and so I'll just tell the little I knew about keeping things in case, to Tus Poss, and it can carry the knewledge to more people in a week than I could write to in a year.

people in a week than I could write to m a year.

Then, to begin with corn—I shall never attempt its salvation on the cob, or at least not until after I shall have rified Cosmo of that Chippews secret. To the best of my knowledge and belief, it is becausery to have the corn all sound, and not so far advanced as to be in the least glazed. My practice is to boil it fifteen minutes on the cob. That hardens the grains so that they one readily be shelled by inserting the blade of a case knife lengthwis, between the

minutes on the cob. That hardens the grains so that they can readily be shelled by inserting the blade of wease knife lengthwise, between the rows and turning it over quickly to one side. The process is a trific tedious, though siter a little practice, one can shell a hundred care an hour, and then it looks so much nester, and the corn will keep infinitely better than it will if set from the cob.

I use, so near as I can guess, so much clean salt as would season the corn I am going to can, just as I like it if, is were to be eaten at once. The salt I dissolve in enough pure vain, or soft water, to fill the jars one-aixth full. Then I put in corn until they are, as near as guess work can direct, three-quarters filled. The next proceeding is to set the jars—so many as I have accommodations for at a time, into cold water in a flat-bottomed kettle, the water reaching half way up the jars. The kettle is phiced over a medicate fire, and remains there until the water both within and without the jars begins to bubble—not quite boil, and then the covers are clapped on and serewed firmly down in a harry. The jars, after being thus treated, are allowed to cool off gradually, and, when cold, are put away in a dry, dark cluses.

In carning corn, the jar should never be filled more than three quarters full—she the swelling of the grains and the generation of gases will be liable to burst the jars, or force a vent about the cover, admitting the air, and the material will be spoiled.

Shell heans, string beans, and green peas, I put up in precisely the same quantity of sugar. In case the material should at any time take on ladnatrious habits, and strifficulty in that way; and then two of my neighbors, too busy with them I out the same quantity of sugar. In case the material should at any time take on ladnatrious habits, and strifficulty in that way; and then two of my neighbors, too busy with the pales with the material, in potting it up, that it required.
